

- Duplicate previous exercise project, and continue here
- As you have already noticed, the validation works, but... it's rather hard to read
 - Imagine if you were the consumer of the API - wouldn't it be nice, if the validation error message is formatted and short?
- Implement a `GlobalExceptionHandler` class
 - This should be created in `validation` package
- End result:
 - If a validation error triggers and you get a 400 Bad Request error, you should see a nicely formatted message, something like this:

```
{  
  "title": "must not be null"  
}
```
