Create a Simple Controller

Objective:

Build a basic REST API with minimal functionality.

1. Create a Spring Boot application with the `Spring Web` dependency.
2. Create a REST controller named `HelloController`.
3. Add the following endpoint:
    - `GET /hello`: Returns a simple message like "Hello, Spring Web!".

Expected Output:

Access `http://localhost:8080/hello` in your browser or Postman and see the message.
